AN INTERNSHIP REPORT

ON

WEB DEVELOPMENT

AT

THIRANEX

Submitted in partial fulfilment of the requirement
for the award of the degree of

B.Tech (Computer Science and Engineering)

IILM UNIVERSITY

Submitted To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

Submitted By

Shreya Singh
Roll Number: 2410031406
Session: 2026-27

CANDIDATE'S DECLARATION

I, **Shreya Singh**, hereby declare that the internship report titled “Web Development Internship at Thiranex” has been prepared by me as part of the requirements for the award of the degree of Bachelor of Technology in Computer Science and Engineering at IILM University, Greater Noida, U.P..

The report presents the learning, activities, technical exposure, and project-oriented work carried out during my internship in the domain of Web Development. The information included in this report is based on my internship learning and the tasks assigned during the training period.

I further declare that this report has not been submitted to any other institution for the award of any degree or diploma. I understand that I am responsible for the originality and authenticity of the work presented in this report.

Signature: _____

Student Name: Shreya Singh

Roll No.: 2410031406

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to Thiranex for providing me the opportunity to undertake an internship in the domain of Web Development. This internship helped me understand how web technologies are used to design, develop, test, and improve practical web applications.

I am thankful to the mentors and team members at Thiranex for their guidance, feedback, and support throughout the internship. Their practical suggestions helped me improve my understanding of front-end development, responsive design, web interfaces, debugging, and project workflow.

I would also like to thank IILM University, Greater Noida, U.P. and the School of Computer Science and Engineering for their academic support and encouragement. Finally, I am grateful to my parents and everyone who supported me during the internship.

Offer Letter

Thiranex
SKILL DEVELOPMENT & FUTURE TECH

Date: 31 July 2026

TO,

Shreya Singh
Intern ID: THX-JUL3126-494

Subject: Offer Letter for Internship in Web Development

Dear **Shreya Singh,**

Following our selection process, we are pleased to offer you an internship position at **Thiranex**. We believe your skills and enthusiasm will be a great addition to our team.

Internship Role	**Intern - Web Development**
Commencement Date	**31 Jul 2026**
Completion Date	**30 Aug 2026**
Work Mode	**Remote / Project-Based**

During this tenure, you will work on practical projects under industry mentorship. Your progress will be reviewed periodically, and your performance will determine the successful completion of the internship.

We look forward to a mutually beneficial learning journey. Please confirm your acceptance by starting your onboarding tasks.

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents a detailed account of the internship undertaken at Thiranex in the domain of Web Development. The internship provided practical exposure to the process of developing modern websites and web-based interfaces. The learning focused on understanding the structure of web pages, styling, client-side functionality, responsive layouts, debugging, and basic project deployment workflow.

The internship combined conceptual learning with hands-on practice. Through project-oriented tasks, I worked on creating user interfaces, organizing web pages, improving responsiveness, handling common development issues, and understanding how different web technologies work together to form a functional website.

4.2 Organization Profile

Thiranex is the organization where the internship was undertaken. The internship domain was Web Development, with practical exposure to website development and related technologies. The internship environment provided an opportunity to understand a professional development workflow, including task understanding, implementation, testing, debugging, and improvement.

The internship experience emphasized practical implementation rather than only theoretical concepts. It helped bridge the gap between academic programming knowledge and the development of usable web interfaces.

4.3 Problem Statement

Many students learn HTML, CSS, JavaScript, and programming concepts as separate topics but have limited exposure to combining these technologies into a complete web-development workflow. A practical internship is therefore required to understand how a website is planned, structured, implemented, tested, and refined.

The problem addressed during this internship was to develop practical web-development skills by working on web pages and project tasks while applying concepts such as responsive design, user-interface development, client-side scripting, debugging, and version-controlled project management.

4.4 Project Objectives

- To understand the fundamentals of modern web development.
- To create structured web pages using HTML.
- To design responsive and user-friendly interfaces using CSS.
- To implement interactive features using JavaScript.
- To understand basic front-end project structure and reusable components.
- To practice debugging, testing, and fixing common web-development issues.
- To understand the workflow of developing and maintaining a web project.

4.5 Scope of the Project

The scope of the internship covers practical front-end and web-development activities. It includes creating web pages, structuring content, applying styles, implementing interactive behaviour, making layouts responsive for different screen sizes, testing the interface, identifying errors, and improving the overall user experience.

The project scope may also include basic use of development tools and version control for organizing source code. The internship report focuses on the learning and development activities performed during the internship and does not claim production deployment unless supported by official project records.

4.6 Technologies and Tools Used

- HTML5 – structure and semantic organization of web pages.
- CSS3 – styling, layouts, responsiveness, and visual presentation.
- JavaScript – client-side logic and interactive functionality.
- Responsive Web Design – adapting interfaces to desktop, tablet, and mobile screens.
- Visual Studio Code – code editing and project development.
- Git/GitHub – source-code management and project sharing, where applicable.
- Web Browser Developer Tools – testing, debugging, and inspecting web pages.

4.7 System Architecture

A basic web-development architecture used during the internship can be represented in layers. The presentation layer contains HTML and CSS responsible for the structure and appearance of the interface. The interaction layer uses JavaScript to handle user actions and dynamic behaviour. The browser acts as the execution environment in which the web application is rendered and tested.

- Presentation Layer: HTML pages and CSS styling.
- Interaction Layer: JavaScript for events, validation, and dynamic behaviour.
- Data/Service Layer: APIs or external services when required by the project.
- Testing Layer: Browser tools and manual testing for identifying UI and functional issues.
- Version Control Layer: Git/GitHub for storing and managing project source code, where applicable.

4.8 Methodology

The internship followed a practical, task-oriented methodology. Each task was approached by first understanding the requirement, planning the page or feature, implementing the code, testing it in a browser, identifying issues, and then refining the implementation.

Phase	Activity	Outcome
1	Requirement Understanding	Clear understanding of the

		assigned task
2	UI Planning	Basic layout and page structure
3	Development	HTML, CSS and JavaScript implementation
4	Testing	Identification of layout and functional issues
5	Debugging	Errors fixed and interface improved
6	Final Review	Completed and organized project work

4.9 Key Learning Outcomes

- Improved understanding of HTML page structure and semantic elements.
- Improved ability to create responsive layouts using CSS.
- Practical understanding of JavaScript-based interactivity.
- Experience in debugging common front-end issues.
- Understanding of browser developer tools for testing web pages.
- Improved ability to organize files and maintain a web project.
- Better understanding of the software development workflow.
- Improved confidence in building and presenting web-development projects.

4.10 Certificates and Project/Communication Proof

The official Thiranex internship offer letter, completion certificate, project screenshots, GitHub/project link, task submissions, or communication proof should be attached in this section wherever applicable. Only original and verifiable documents should be inserted.
